Well-qualified frontend developer, familiar with a wide range of programming utilities. familiar with UI part and API integration requirements. Handles any part of the process with ease.

Collaborative team player with excellent technical abilities. Offering 4 years of relevant experience.

RECENT PROJECT

1. Item Banking: -

Project Summary: It's a web app that has different modules like an assignment module, a user module, a login module, a role module, an asset module, etc. The main purpose of this project is to generate questions for different exams after the verification of all these modules.

My Contribution: I worked on the asset module for creating assets after uploading audio, video, and images. After creating assets, the manager can view, update, delete, and swap assets. I also worked on the global style part for all modules and the UI and functional

2. Black Box: -

Project Summary: It's a video conferencing web app that allows users to connect with video, audio, phone, and chat. It's developed using the Twilio Video API and the TokBox Video API.

My Contribution: - I worked on adding the raise hand functionality during calls, mute and unmute functionality, room creation for users, dominant speaker (identifying who is speaking), message notification and count during chat, a background image for users, and different small features.
